

Teachers' Guide

Presentation

The presentation is about historical moments of distant communication, highlighting it is a great need of humans. Pay some time to discuss it with your students, so they understand the need of the Bluetooth protocol. It is a technology that was not magically designed, but it is something that evolves through the years.

The activity is about the data transmit from one device to another. The first two units contain some concepts of computer science that students need to know. The worksheet contains detailed information for everything the students need to remember, and to have at home, to return to it for their future programs.

Exercises
