

Teachers' Guide

Presentation

Refer to what data is, their presentation in a diagram, their process and analysis, to draw specific conclusions. All the above are concepts that students are not aware of, so tell them in simple words, with many examples and adjust to the level of your class.

Exercises

Before you do the exercises in the lesson, study them yourself as part of your preparation.

Unit A

In the first unit, we just want students to find a value from the micro:bit sensor. This value is unique for each group, depending on the light level around and how close to the lamp or sunlight they are, if they keep the device stable, etc.

Unit B

Beware! In the serial write value you need to write a word in latin characters.

Also, study the notes in the worksheet.
